No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

This cDNA sequence comprises the 5' region of a cDNA clone commutine Down syndrome-cell adhesion molecule (DS-CAM), a comember of a novel subclass of the Ig superfamily with homology to come commutate cell adhesion molecules. The middle region (see AAV31986) cc and 3' region (see AAV31987) of the clone are also provided. The commutate DS-CAM clone was isolated from a C57 Black/6 mouse brain cc cDNA library using human DS-CAM commutate of the clone are also provided. The cc cAM42086-87), as well as expression vectors and host cells, cc transgenic animals, antisense oligonucleotides, and primers useful cc associated with developmental and neurological processes. They can cc methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and cc therapy of developmental and neurological abnormalities such as communication, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
DS-CAM2 (see AAW42087), an extracellular, soluble protein belonging to a novel subclass of the 1g superfamily with highest homology to neural cell adhesion molecules. A modified direct cDNA selection technique was applied to bacterial and Pl artificial chromosomes between ETS2 and MX1 by using cDNA from trisomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk gestation) cDNA library. Further clones were obtained by exon trapping, and the complete DS-CAM2 CDNA sequence was identified. DS-CAM2 is a splice variant of membrane-bound DS-CAM1 (see AAW42086) and is deleted for the entire transmembrane domain. The DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DS-CAM2; Down syndrome-cell adhesion molecule; neural signal transduction; trisomy 21; mental retardation; holoprosencephaly; corpus callosum agenesis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            transgeric animals, antisense oligonucleotides, and primers useful for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antiserse oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21q22.2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV31985-87), expression vectors and host cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              signal transduction; trisomy 21; mental retardation; holoprosencephaly; corpus callosum agenesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1190
                                                                                                      gestation) cDNA library. Further clones were obtained by exon trapping. The complete DS-CAM1 cDNA sequence was deduced from overlapping clones. A splice variant cDNA (see AAV11988), encoding non-membrane bound DS-CAM2 (see AAW42087), was also identified. The DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome 21q22.2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV31985-87), expression vectors and host cells,
                                                                                                                                                                                                                                                                                                        DS-CAM1 (see AAW42086), a cell surface glycoprotein belonging to a novel subclass of the 1g superfamily with highest homology to neural cell adhesion molecules. A modified direct cDNA selection technique was applied to bacterial and Pl artificial chromosomes between ETS2 and MX1 by using cDNA from tricomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mat_peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sig_peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human Down

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides are used for inhibiting translation of mRNA.

                                                                                                                                                                      This is cDNA clone ethbu0018f2. It was isolated from human foetal brain cDNA using a novel merbod for identifying genes encoding novel secreted or membrane associated proteins. The method involves: (i) liquiting a library of cDNA to DNA such as vector purAP3 (see ANV27206) encoding a kaline phosphatase (AP) that lacks signal peptide and membrane anchor sequences (see AAW55047); (ii) transforming bacteria with the products; (iii) transfering, separately, DNA from (some of) the bacterial clones into mammalian cell library that expresses AP; and (v) identifying the corresponding clone in the bacterial library, isolating the corresponding clone in the bacterial library, isolating the corresponding clone in the bacterial library, isolating the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          signal peptide; alkaline phosphatase; ethb0018f2; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cDNA clone ethb0018f2
                                                          as a partial CDNA clone of a novel neural adhesion molecule (see AAW55045) that contains multiple, consecutive IgG domains. The novel method is very sensitive and is suitable for high throughput screening techniques and automation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (MILL-) MILLENNIUM BIOTHERAPEUTICS

                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as a localised neuropathies and central nervous system diseases, such as a localised neuropathies and central nervous system diseases, such as a localised neuropathies and central nervous system diseases, such as alternal sclerosis, and Shy-Prayer Syndrome. Other uses include the utilisation of the activity brayer Syndrome. Other uses include the lateral sclerosis, activities such as: Inmune system suppression, activity, chemolactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C N S discretars

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the nucleotide sequence of Herpes simplex virus ICP4 used in the method of the invention as modulators of a poptosis. The method; and products can be used to identify compounds which modulate (stimulate or inhibit) apoptosis in cells. They can be used to immortalise cells for the study of these cells or for growing cells in large numbers for the productions of proteins. They can also be used for stimulating apoptosis in cells, e.g. for treating a subject with a HSV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22-OCT-1998.

                                                                                                                                                                                                                                                                                                                                                                                                                                The herpes simplex virus (HSV) alpha-4 gene encodes infected cell protein number 4 (1CP4). Both the alpha-4 gene and ICP4 can be used to block cell apoptosis. Similarly the administration of an agent that inhibits ICP4 or the alpha-4 gene can induce apoptosis in HSV infected cells. This can be used for the immortalisation of cells, production of proteins, gene therapy, or inhibition of cell death induced in vivo. They can also be used for production of therapeutics comprising inhibitors of HSV ICP4 function, useful for treating HSV function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a DNA encoding functional human acrosome reaction protein, PKDREJ or P3, PKDREJ is a verm protein involved in binding the sperm to the egg and/or triggering the acrosome reaction. It exhibits homology to human polycystin-1 and sure. It can be used to identify antibodies or proteins that block the acrosome reaction and compounds that trigger acrosome reaction in the absence of zona pellucida. Molecules that enhance the efficacy of the acrosome reaction protein can be used to increase fertility and those blocking its action can be used as contraceptives. DNA encoding PKDREJ can be used ir gene therapy and also as primer or probe for identifying sequences that encode mutant forms of acrosome reaction protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              W09964457-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A P.glumae PGJ genomic library was constructed in cosmid vector c2RB. The lipA gene was isolated by screening with probes based on the vector library and a lipa sequence of the P.glumae lipase. Immediately downstream of the lipA yene was found a second open reading frame, designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2. It is ORF2 which encodes the lipase-specific designated ORF2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ф
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the CHC (cyclohexanccarboxylic acid) operon of the streptomyces collinus (AAA97538). This operon encodes enzymes involved streptomyces collinus (AAA97538). This operon encodes enzymes involved characteristic pathway: AnsiJAnsK (AAB23249). In the shikimic acid-CHC-COA biosynthetic pathway: AnsiJAnsK (AAB23251), and ansk (AAB23250), Chc Ared (cyclohexenylcarbonyl COA reductase; AAB23251), and answ (protein sequence not given in the specification). The invention case of the sequence of given in the specification, and answ genes, to also relates to the isolated ansJAnsK, ansi, chc and answ genes, to call so relates to the isolated ansJAnsK, chc and answ genes, and a given the cock comprising at least one of these genes, and a compression cassette. In the host cell comprising such an expression cassette. In the host cell is a bkd mutant of streptomyces avermittilis constitutive erms promoter. This comparation is transformed with an expression construct comprising the CHC operon under the control of the constitutive erms promoter. This constitutive erms promoter the control of the constitutive erms by produce the control parasitic avermectin analogue doramectin. Unlike prior art control parasitic avermectin analogue doramectin to sable to production of control parasitic avermectin analogue doramectin. Unlike prior art control parasitic avermectin analogue doramectin.

                                                                                                                                                                                                                                                                   The present sequence is a putative coding sequence for the corn 1-deoxy-D-xylulose 5-phosphate synthase enzyme (DXPS). Its protein is 1-deoxy-D-xylulose 5-phosphate synthase enzyme (DXPS). Its protein is 1 involved in the isoprenoid biosynthesis pathway. The cDNA was identified by sequencing a number of clones and then comparing their protein the sequences to known proteins; this showed the sequence's similarity to the capsicum annuum DXPS sequence. The DXPS gene and protein can be used to create transgenic plants which express the gene at either different create transgenic plants which express the gene at either different create transgenic plants which express the gene at either different transcriptions.
                                                                                                                                                                                                                                                                                                                                                                                                                                Polynucleotide encoding 1-deoxy-D-xylulose 5-phosphate synthase enzyme useful for producing transgenic plants and for producing antibodies specific to which is useful for screening cDNA expression libraries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     03-DEC-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               03-MAR-1993.
                                                                                                                                                                                                                                                                                                                                                                             The sequence is that of the gene encoding the human KA-2 receptor, a kainate high affinity receptor of the EAA2 (Excitatory Amino Acid) family. The sequence can be used in the identification of sequence related genes. It can also be used to produce calls able to produce the receptor, these cells and membrane fragments of them can be used to assay compounds for binding affinity to human EAA receptor i.e. to screen compounds for potential use as drugs against CNS disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated polynucleotide encoding human excitatory amino acid-2 receptor - useful for determining binding affinity of cpds. for the receptor in assaying for drugs to treat CNS disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Kamboj R,

It was isolated from a phagemid in a soil DNA library using as probe a gene fragment (AA763568) obid. by amplification of soil DNA using degenerate primers (AAT965548-49) based on conserved portions of family F cellulases. It was sequenced by primer walking over the phagemid insert using the same degenerate primers as initial extension primers. Subsequent extension primers were constructed by examining the previously generated sequence data. The novel by anase gene can be used for prodn. of xylanase for industrial

Division of Experimental Animal Research in Riken contributed to primer proper mouse tissues. First strand CDNA was primed with a primer proper primer and primer primer generated by using trehalose thermo-activated reverse transcriptase prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second and subsequently enriched for full-length by cap-trapper. Second Strand cDNA was prepared with the primer adapter of sequence [5' strand cDNA was prepared with the primer adapter of sequence [5' strand cDNA was prepared with the primer adapter of sequence [5' strand cDNA of size comprised longer than 7 kb was with BamHI and XhoI. CDNA of size comprised longer than 7 kb was with BamHI and XhoI. CDNA of size comprised longer than 7 kb was with BamHI and North Lambda FLC I. Cloning sites, 5' end: Sall; 3' bulk excision from Lambda FLC I. Cloning sites, 5' end: Sall; 3'

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 was blunt end-repaired with T4 DNA polymerase and T4 polymerase and T4 polymerase and T4 polymerase were polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel 10.5 kb range using preparative begins to be copy-number of pubbac (147321141ab)AF129072.1), a copy-number of pubbac (147321141ab)AF129072.1),
